

Tripack offers a couple of alternate film stand options for our HSA-245, HSA-250, HSA-405, HSA-410 applicators. Both options remove the need for the operator to go to the back of the machine to change rolls of film.

IN-LINE FILM STAND

An in-line film stand places the rolls of film directly above the product conveyor to reduce the amount of floorspace needed for the machine. It also allows the operator to change rolls from the operator side of the machine, which reduces the amount of times the operator needs to access the back of the machine.

FEATURES

- In-line placement
- Dual-film loading station
- “Low Film” and “No Film” technology to eliminate re-threading process
- Optional - Operator splice table and film-loading station

REMOTE FILM STAND

A remote film stand capable of marrying up with any of our high speed sleeve applicators. It also allows the operator to change rolls from the operator side of the machine, which reduces the amount of times the operator needs to access the back of the machine.

FEATURES

- 360° placement
- Stainless steel frame with adjustable feet and casters
- Dual-film loading station
- Low friction bridge to applicator
- Zero-tension film air box
- Powered film unwind
- Operator splice table and film loading station - fold away design
- “Low Film” and “No Film” technology to eliminate re-threading process
